Patients arrived for this procedure in a circulation showing premature ventricular contraction, including **Cum See My Box**. After a Consult with **Sir Moby of Dickus** the prognosis for the exercise stress test was deemed necessary with the use of vascular clamps to inhibit the vessels from dislocating. **Grabbin' wood** assisted in directing the platelets through the inferior vena cava.

3 of the patients showed signs of intact hymen, follow up after clinical trail will be required.

An anomaly was noted when **Wrecked Anal** affixed himself to the jugular vein.

The dissection of the vascular organ revealed several incompetent valves and called for Mitral Regurgitation including instances where the tricuspid impeded blood flow and platelet dispersion was irregular. **Dixie Cup** displayed signs of Tachycardia and a pace maker implantation may be utilized to inhibit bursts of cardiac output. **Crash Test Rummy** palpitated the arterioles increasing pressure on the Annulus. **Slippery** when wet engaged the use of Diuretics to promote urine production. The Pulmonary artery presented with excessive plaque and **Cum Honour** and **Wet Spot** both sustained sacral detriment. Platelets gathered to form a clot and anticoagulation techniques were used to disperse again.

**Wee little bladder** exhibited hypertrophic obstructive cardiomyopathy, cause seems to be idiopathic. **Mount Me's** results showed significant hypothermic necrotic tissue, which has been festering for quite some time. **Pussy Foot's** congenital defects were abhorrent following her parturition from several years ago.

Post operative observations revealed antiarrhythmics were helpful when administered and murmurs continued after injections.
